1 Using the Import Wizard

You can use VMware Zimbra Collaboration Server Import Wizard for Microsoft® Outlook® (Import Wizard) to import your Microsoft Outlook personal folders (.pst) files to the ZCS server.

Note: *The Import Wizard can import .pst files from Outlook 2000 and Outlook XP, provided that the Import Wizard is run on a machine with either Outlook 2003, Outlook 2007, or Outlook 2010 installed.*

Note: *A 64-bit operating system is supported if the system running the migration tools has a 32-bit version of the email client installed.*

Note: *If you set your computer's regional settings to a language other than English (United States), the Import Wizard might fail. Your regional settings are located on your computer at Control Panel>Regional and Language Options.*

When you import your email messages, filter rules, attachments, calendar, contact lists, tasks, and personal distribution lists to the ZCS server, your Outlook folder hierarchy is maintained. If you assigned categories to your messages and contacts, these are converted to tags in your ZCS mailbox.

Your archived .pst files can also be imported. You must run the Import Wizard for each .pst file you are importing. If you have a large number of archived or additional .pst files to import, talk to your administrator.

Your administrator will give you the following information which you will need to import your .pst files:

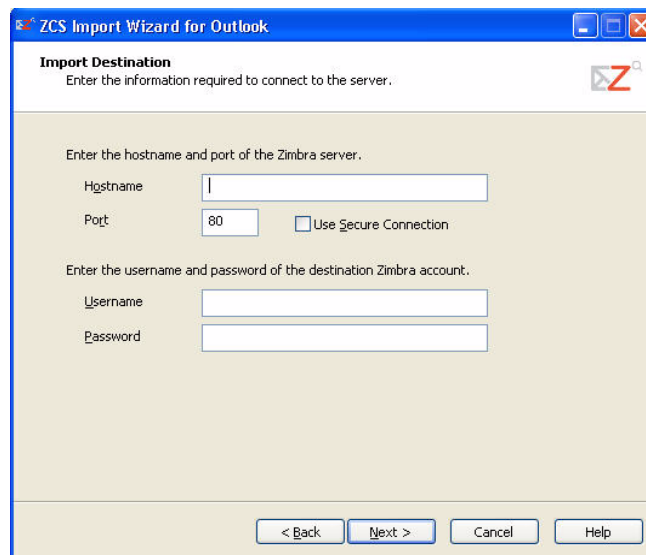

- **Hostname.** The ZCS server domain name (DNS).
- **Port.** The port number for the server. Usually 80 is the port number for non-secure connections, and 443 is the port number for secure connections.
- **Use Secure Connection.** Check this box, only if your administrator instructs you to.
- **User name.** Your ZCS account email address. The address should be entered as **name@domain.com**.

- **Password.** Your ZCS account password.

Once you have the above information, and the .pst files that you are going to import, you are ready to begin. Use the following steps to import your .pst files with the Import Wizard.

Using the Import Wizard

1. Open the Import Wizard. The first field window will give you basic information about the Import Wizard. Click **Next** to go to the Import Destination Window.
2. **Import Destination.** Enter the information that your administrator has given you in each of the following fields. When you are finished, click **Next**.
 - **Hostname.** The ZCS server domain name (DNS).
 - **Port.** The port number for the server. Usually 80 is the port number for non-secure connections, and 443 is the port number for secure connections.
 - **Use Secure Connection.** Check this box, only if your administrator instructs you to.
 - **User name.** Your ZCS account email address. The address should be entered as **name@domain.com**.
 - **Password.** Your ZCS account password.

The screenshot shows the 'ZCS Import Wizard for Outlook' window, specifically the 'Import Destination' step. The window has a blue title bar and a light beige background. It contains the following elements:

- Title Bar:** 'ZCS Import Wizard for Outlook' with standard Windows window controls.
- Section Header:** 'Import Destination' with a subtitle 'Enter the information required to connect to the server.'
- Instructions:** 'Enter the hostname and port of the Zimbra server.'
- Fields:**
 - Hostname:** A text input field.
 - Port:** A text input field with '80' entered.
 - Use Secure Connection:** An unchecked checkbox.
- Instructions:** 'Enter the username and password of the destination Zimbra account.'
- Fields:**
 - Username:** A text input field.
 - Password:** A text input field.
- Buttons:** '< Back', 'Next >', 'Cancel', and 'Help' at the bottom.

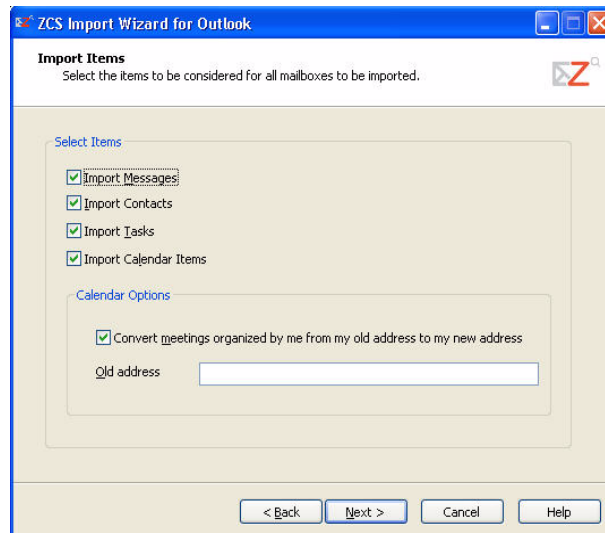

3. **Import PST.** Select your .pst file to import. You can click **Browse** to locate the file.

The main .pst file is usually in the Microsoft Outlook folder in the Local Settings/Application Data directory. To find your .pst files, open Outlook click **Files>Open>Outlook Data Files**. Use the **Look in** drop down arrow to see the file name and path for your .pst file. You can also go to **File>Data**

File Management to see a complete list of all .pst files for the current profile and the paths of those .pst files. You can also use your computer's Search feature to find .pst files on your computer.

Once you've selected the .pst file to import, click **Next**. If you have protected your .pst with a password, you must enter your password to continue.

4. **Import Items.** Select which items in the .pst file to import, and select calendar options. The item options are as follows:
 - **Import Items.** Select whether or not to import Mail, Contacts, Tasks, and Calendar Items.
 - **Calendar Options.** Choose if you want to:
 - **Convert meetings.** This converts meetings organized under your old email address to your new email address. Provide your old email address in the field provided, if you select this option.

When you are finished selecting your import items, click **Next**.

5. **Import Options.** Set import options for which messages to import. The import options are as follows:
 - **Folder options.** Select whether to import your Junk-Mail folder and Deleted Items folder
 - **Progress Logs.** Select whether to ignore previously imported items. If you do not check this box, you will have duplicates of any previously imported items in their ZCS account.
 - **Date Filter.** Select whether to import items received after a specific date. If you do not select to filter items by date, all items will be imported.
 - **Import Message without Body** enables messages that do not include the body of the message to be imported. If you configured your IMAP to download only the header and to ask before downloading the body, this

option will import any emails that you have not downloaded the body to yet. If you do not check Import Message without Body, messages with only the header information are not imported.

- **Log messages on failure** allows extra data to be created if the import fails. If a message is not imported and this option is enabled, the message that failed to be imported is logged on the client side. Users can inspect the message to determine if the message content was the cause of the failure.

When you are finished selecting your import options, click **Next**. A Begin Import Process? window will appear.

6. Click **OK** in the Begin Import Process? dialog. The Import Wizard begins importing your .pst file.

If you have Outlook running, you will be prompted to close it. During the import of your pst file, if the Import Wizard detects that some messages need addresses from Active Directory, you are prompted for information to connect to Active Directory. Enter the following information. If you do not know what to enter, ask your system administrator.

- Your Active Directory server name, enter as **activedirectory.company.com**
- Your Windows user name and password.

Note: If you are prompted to log on to your Active Directory while importing files and you do not connect, some of the imported messages will have blank **From** and/or **To** headers.

When your import is finished, a Import Completed message is displayed, showing the total errors and total warnings for your import. Click **OK**. The Import Completed dialog appears.

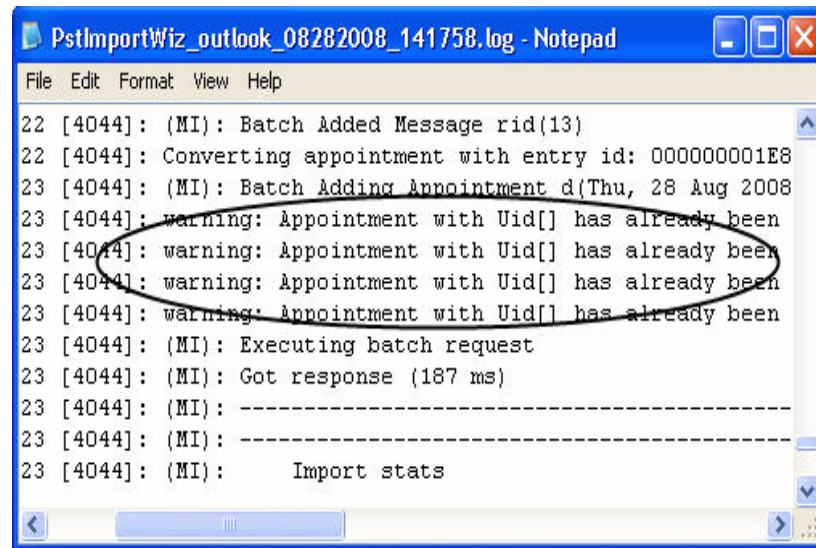

- Review your import in the Import Completed dialog.

Any errors or warnings generated during the import process are displayed on the **Import Complete** dialog box. You should review the information on this page. If you need more information click the **Open Log File** button and search the log for details.

Note: Don't close the Import Wizard until you reviewed the log. If you close the Import Wizard while the **Delete all log files** box is checked, you will not be able to view the logs at a later time.

To import the .pst file again, make sure you check **Ignore previously imported items** on the Import Options dialog so that messages and contacts that have been imported earlier are not imported again.

- The log opens in a .txt file in Notepad. Use Ctrl+F to find the word 'warning' and locate it in the log.

9. To import another .pst file, click **Import Another**. Run the Import Wizard again to import additional .pst files. If you have a large number of .pst files to import, talk to your administrator.

10. If you are finished importing your .pst files, click **Finish**.

You have now finished importing your .pst files to your ZCS account.

Outlook Features Not Imported

The following Outlook types are not imported:

- Notes
- Alerts
- Journal
- Files you may have created in Outlook
- Contacts listed without a complete email address in Personal Distribution lists.
